

Installation Instructions

1801121 2" Receiver Hitch

Applications

2020+ Chevy/GMC 2500/3500 Pickup Truck with Service Body - Excluding Short Bed

Capacity

16,000 lbs. Maximum Gross Trailer Weight (MGTW)
 1,600 lbs. Maximum Vertical Load (MVL)

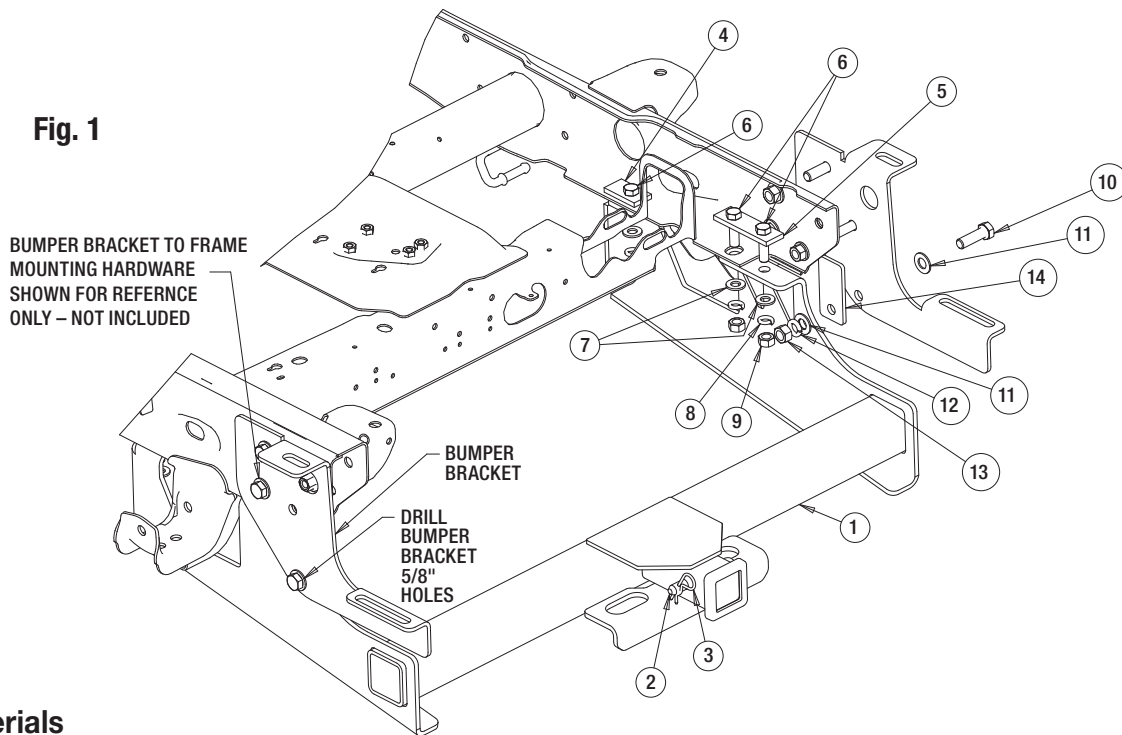

WARNING

To avoid serious injury or death, check that all hitch fasteners are secure and properly torqued before use.

1. Position the hitch against the frame and align the hitch to the middle hole of the truck rear frame. The other two holes should also line up with the vehicle pre-drilled holes/slots.
2. Clamp the hitch on to the frame temporarily, ensuring that it is centered and flat. Relocate the tire deflector on the frame to fit hitch as needed.
3. Secure the hitch to the frame with six 9/16" bolts (6), two one-holed spacers (4), two two-holed spacers (5), four flat washers (7), six split lock washers (8), and six nuts (9) (See Figure 1).
4. For some model vehicles, if pre-drilled holes are not present, drill as needed.
5. Install service body bumper brackets (NOT INCLUDED) per service body instructions.
6. Using the hitch brackets as a template, drill one 5/8" hole through the bumper brackets on both sides.
7. Attach the bumper brackets to the hitch using two 5/8" bolts (10), four flat washers (11), two split lock washers (12), two nuts (13), and two spacers (14) (See Figure 1). This is required to achieve the rating.
8. Torque all 9/16 fasteners to 110 ft-lb and 5/8" fasteners to 150 ft-lb.
