Universal Backup Warning Alarms for Fleet and Heavy Trucks

As we are excited to offer two all-new heavy-duty safety products designed to alert pedestrians and other nearby drivers when a vehicle or piece of heavy equipment is in reverse motion. Available for immediate shipment, universal backup alarm products VSM322 and VSM326 are discrete devices with simple two-wire connections that power on automatically and output a sound when a driver shifts their vehicle into reverse, or manually through the use of an On/Off toggle switch, to get the attention of anyone nearby.

Numbers and Features
